

SUPPLY (STRATEGIC UNIFIED PROTECTION & PUBLIC LOGISTICS FOR YOU)

We are a 501c3 that is developing user-friendly solutions that will help everyone who is looking for high-quality information to keep individuals, families, and communities safe and healthy.

The Problem: Underserved and minority communities too often face the greatest barriers to protection.

Underserved and minority communities are often hit hardest by airborne health threats while having the least consistent access to the tools that help reduce risk. High-filtration masks, COVID tests, air purifiers, filters, and other clean-air resources can make a meaningful difference, but these supplies are frequently too expensive, unavailable locally, or distributed unevenly. Communities already facing barriers to healthcare, transportation, stable housing, or workplace protections are too often left to navigate prevention on their own.

At the same time, many grassroots groups and local leaders working to fill these gaps are under-resourced themselves. They may know exactly what their communities need, but lack the funding structure, purchasing power, operational support, and logistics capacity to move quickly and at scale. As a result, people who need protection the most are too often the least likely to receive it.

Our Solution: SUPPLY

SUPPLY is PHAN's public protection and logistics program designed to strengthen community access to high-quality protective resources. Formerly CPSP, the program has evolved from a direct support effort into a broader logistics and infrastructure model that helps mission-aligned teams move faster and operate more effectively.

SUPPLY provides practical backbone support, including fundraising enablement, purchasing coordination, fiscal sponsorship when needed, and distribution logistics, so partners can focus on getting effective protection into the right hands. Through this work, PHAN and its partners have already secured and distributed more than \$100,000 worth of PPE in the first year alone, demonstrating a scalable, community-centered model for rapid protection when it matters most.

By reducing cost and access barriers and helping trusted local efforts scale, SUPPLY supports stronger preparedness, more equitable distribution, and faster response in the face of ongoing and emerging airborne health threats.

Help Us Expand SUPPLY

SUPPLY is built to grow. With additional support, PHAN can expand procurement capacity, strengthen partner distribution networks, improve logistics infrastructure, and increase access to protective tools for underserved, high-risk, and historically marginalized communities. Funding and partnering helps us move beyond one-off distribution and toward a durable, scalable public health protection system.

How to use

01

Access high-quality masks, tests, and clean-air supplies through PHAN-supported distribution efforts.

02

Support community-led protection projects with fiscal sponsorship and logistics coordination.

03

Help mission-aligned organizations procure and distribute protective tools more effectively.

04

Expand equitable access to prevention resources in underserved and high-risk communities.

05

Strengthen local readiness through practical public health supply infrastructure.
